

Our Environmental Policy Overview

Our environmental sustainability policy statement includes our belief that:

- The Earth is a system where all elements are interconnected and inter dependent
- Respectful care of the environment and its conservation for future generations is everyone's moral obligation, personal responsibility and constitutional right;
- The true value of natural resources, biodiversity and ecosystem services should be accounted for in their use, and any harm to the natural environment should be avoided or minimised;
- Potential benefits to the environment or human health and safety should always be maximised;
- We must comply with Environmental legislation, pursue and exceed benchmark Sustainability standards and require others with whom we do business to do the same.
